

AI Prompt Library for Business Analysts — Starter Pack

210 ChatGPT Prompts | Linton Business Solutions | lbsconnect.net *Works with ChatGPT, Claude, Gemini, and Microsoft Copilot*

Included in this pack:

- Category 1: User Stories & Acceptance Criteria — 70 prompts
- Category 2: Requirements Gathering & Elicitation — 80 prompts
- Category 3: Meeting Minutes & Action Items — 60 prompts

How to use: Copy any prompt → replace [bracketed placeholders] with your project details → paste into ChatGPT, Claude, or Gemini.

CATEGORY 1: USER STORIES & ACCEPTANCE CRITERIA

70 Prompts

Writing User Stories

1. Write 5 user stories for a government employee self-service portal where workers can submit time-off requests, view pay stubs, update personal information, and download tax documents. Use the format: As a [role], I want [goal], so that [benefit].
2. I'm building a [system name] for a [agency/organization type]. Write 8 user stories covering the core workflows for a [user role] who needs to [main objective]. Use standard user story format.
3. Convert these business requirements into user stories: [paste requirements]. Maintain the original intent but rewrite each requirement from the end user's perspective using the As a / I want / So that format.
4. Write user stories for a mobile application that allows field inspectors at a state agency to complete inspection checklists, attach photos, add GPS coordinates, and submit reports offline when connectivity is unavailable.

5. I have a large epic: "As a procurement officer, I want a digital contract management system." Decompose this into 8–10 sprint-ready user stories covering: creation, routing, approval, signature, storage, and search.
6. Generate user stories for the Admin role in a case management platform used by a county social services department. Cover: user management, role assignment, audit logging, data exports, and system configuration.
7. Write user stories for a reporting module that allows [user role] to generate standard reports, create custom reports using a drag-and-drop builder, schedule automated delivery, and export to PDF or Excel.
8. I need user stories for a data migration project moving from [old system] to [new system]. Write 6 stories covering: data validation, mapping rules, migration scheduling, reconciliation reporting, error handling, and rollback procedures.
9. Review these user stories and identify which violate the INVEST criteria (Independent, Negotiable, Valuable, Estimable, Small, Testable). For each violation, explain the issue and rewrite the story: [paste user stories].
10. Write 5 user stories for Section 508 / WCAG 2.1 AA accessibility compliance. Cover: screen reader support, keyboard navigation, color contrast, text resizing, and form field labels.
11. Generate user stories for a citizen-facing online permit application portal. The citizen should be able to: create an account, start an application, save drafts, upload supporting documents, pay fees online, and track application status.
12. Write user stories for the notification system in a case management application. Users should receive email, SMS, and in-app alerts for: status changes, assigned tasks, approaching deadlines, and system messages.
13. I have these stakeholder interview notes about what users need from a new scheduling system: [paste notes]. Extract and write user stories from these notes, grouping related functionality.
14. Write user stories for an audit trail feature that must log all data changes, including: who made the change, what was changed, the old value, the new value, and the timestamp.
15. Create user stories for a document management feature allowing users to: upload, version-control, tag, search, share, and archive documents within a case file.

Government & Compliance User Stories

16. Write user stories for a FISMA-compliant authentication system. Cover: multi-factor authentication, PIV card support, session timeout, failed login lockout, and password policy enforcement.
17. Generate user stories for a federal grant management system used by state agencies. Cover: grant discovery, application submission, award acceptance, reporting milestones, drawdown requests, and closeout procedures.
18. Write 6 user stories for a Freedom of Information Act (FOIA) request management module. Cover: request intake, routing, tracking, redaction workflow, response generation, and appeals.
19. Create user stories for a records retention module that must: automatically classify records by type, apply retention schedules, flag records for review, and initiate disposition workflows.
20. Write user stories for a state agency procurement portal covering: vendor registration, solicitation publication, bid submission, evaluation scoring, award notification, and contract execution.
21. Generate user stories for a public-facing data portal where citizens can search, view, filter, and download open government datasets. Include accessibility and mobile responsiveness requirements.
22. Write user stories for an employee onboarding workflow at a government agency. Cover: HR setup, IT provisioning, badge issuance, training assignment, mentor assignment, and 90-day check-ins.
23. Create user stories for a compliance tracking module that: monitors regulatory requirements, assigns owners, tracks completion status, and generates compliance dashboards for leadership.
24. Write user stories for a government contract modification workflow covering: request, justification, legal review, CO approval, contractor acknowledgment, and system update.
25. Generate user stories for a background investigation request system used by HR to: initiate, track, and receive results for security clearance investigations.

Acceptance Criteria — Gherkin Format

26. Write Gherkin acceptance criteria (Given/When/Then) for this user story: As a registered user, I want to reset my password via email so that I can regain access when I forget my credentials.
27. Generate Gherkin scenarios for a search feature that must: return results within 3 seconds, support keyword and phrase search, allow filtering by date range and category, and highlight matching terms in results.
28. Write Gherkin acceptance criteria for a file upload feature where users can upload documents up to 25MB, in PDF, DOCX, or XLSX format only, with a virus scan before acceptance.
29. Create Gherkin scenarios for a payment processing feature including: successful payment, declined card, insufficient funds, session timeout during payment, and duplicate transaction detection.
30. Write Gherkin acceptance criteria for a role-based access control system where: Admin users can create and deactivate accounts, Manager users can view team reports, Standard users can only access their own data.
31. Generate Gherkin scenarios for an auto-save feature that: saves form data every 60 seconds, preserves data on browser close, and prompts the user to restore their session on return.
32. Write Gherkin acceptance criteria for a multi-step form wizard that: validates each step before progression, displays a progress indicator, allows backward navigation without losing data, and sends a confirmation email on completion.
33. Create Gherkin scenarios covering the happy path and 3 error paths for a user login feature with MFA enabled.
34. Write Gherkin acceptance criteria for a report generation feature that must: handle datasets up to 500,000 rows, complete within 30 seconds, and provide a download link via email for large reports.
35. Generate Gherkin scenarios for a data import feature that: validates file structure, checks for duplicate records, displays a preview before import, logs all changes, and sends a summary report after completion.

Acceptance Criteria — Conditions of Satisfaction

36. Write conditions of satisfaction for this user story: As a manager, I want to view a dashboard of my team's open tasks so that I can identify bottlenecks and reassign work as needed.
37. Generate non-functional acceptance criteria for a web application that must: load pages within 2 seconds, support 500 concurrent users, maintain 99.5% uptime, and pass an OWASP security scan.
38. Write acceptance criteria for a data synchronization feature that must: sync between the mobile app and server every 5 minutes when connected, queue changes when offline, and resolve conflicts using a last-write-wins rule.
39. Create acceptance criteria for an email notification system that: delivers within 5 minutes of trigger, includes an unsubscribe link, renders correctly in Outlook, Gmail, and Apple Mail, and logs delivery status.
40. Write conditions of satisfaction for an audit log feature covering: what events must be logged, required data fields, retention period, access controls, and export capability.

Epic Decomposition & Story Splitting

41. This feature is too large for one sprint: "Build a complete vendor management module." Split it into 4–6 epics and break each epic into 3–4 user stories completable in a 2-week sprint.
42. I have a user story estimated at 13 story points: "As a user, I want to complete my profile so the system can personalize my experience." Split this into stories of 3 points or less, maintaining user value.
43. Decompose this workflow into user stories: A supervisor receives a daily digest of pending approvals, clicks through to review each item, can approve or reject with a comment, and the system notifies the requester of the decision.
44. Break down "Build an API integration with [third-party system]" into user stories covering: technical discovery, authentication setup, data mapping, error handling, testing, monitoring, and documentation.
45. I have an epic for a reporting module. Write the user stories for the MVP phase only — the smallest set of stories that still delivers real value to users.

Story Refinement & QA

46. Review these user stories for ambiguity, missing actors, unclear benefits, and untestable criteria. Rewrite any that need improvement: [paste user stories].
47. These user stories were written by a business stakeholder. Rewrite them using proper BA structure: remove implementation details, add the "so that" benefit, and make them testable: [paste stories].
48. Identify the dependencies between these user stories and flag any that cannot be built independently: [paste list of user stories]. Suggest a recommended build sequence.
49. Write the Definition of Ready checklist for user stories in our Agile team. Include criteria for: scope clarity, acceptance criteria, design availability, dependency identification, and estimate consensus.
50. These user stories were each sized at 8 story points. Identify which can be split further and provide the split stories: [paste user stories].

Edge Cases & Error Scenarios

51. I have this happy-path user story: [paste story]. Write 5 additional stories covering the key error scenarios, edge cases, and alternate flows.
52. Write user stories for the error handling behavior of a form submission when: the network drops mid-submit, a required field is blank, a file exceeds size limits, the session has expired, and the server returns an error.
53. Generate user stories covering accessibility edge cases for a form: a user navigating entirely by keyboard, a screen reader user, a user zoomed to 200%, and a user with a motor impairment using switch access.
54. Write user stories for the system behavior when a concurrent editing conflict occurs — two users editing the same record at the same time.
55. Create user stories for the data validation rules on a person record: name fields, date of birth, SSN format, phone number formats, email format, and address validation.
56. Write user stories for the system's behavior during scheduled maintenance windows: advance notification, graceful degradation, read-only mode, and restoration confirmation.

57. Generate user stories for offline functionality in a mobile application: what the user can do offline, what is restricted, how data syncs when connectivity returns, and how conflicts are handled.
58. Write user stories for timeout and session management: idle session warning, session expiration, data preservation on timeout, and re-authentication without data loss.
59. Create user stories for a cascading delete scenario: when a parent record is deleted, what happens to all related child records, dependent records, and historical audit data.
60. Write user stories for system behavior when an integration with [external system] is unavailable: fallback behavior, user messaging, retry logic, and data reconciliation after restoration.

Specialized Story Types

61. Write infrastructure/DevOps user stories for a CI/CD pipeline covering: automated testing, deployment to staging, approval gates, production deployment, and rollback capability.
62. Generate data migration user stories for moving [X] years of historical records from a legacy system to a new platform, covering: data cleansing, mapping, validation, parallel run, and cutover.
63. Write security user stories for a web application covering: input validation, SQL injection prevention, XSS protection, CSRF protection, and penetration testing sign-off.
64. Create training and help content user stories: contextual help tooltips, searchable knowledge base, onboarding walkthrough, video tutorials, and printable user guides.
65. Write performance user stories defining system behavior under load: normal load, peak load, stress testing, graceful performance degradation, and recovery time objectives.
66. Generate integration user stories for connecting [System A] with [System B] via REST API: authentication, data mapping, error handling, retry logic, logging, and monitoring.
67. Write user stories for a data archiving process that: moves records older than [X] years to cold storage, maintains searchability, enforces access controls on archived data, and supports legal hold exceptions.
68. Create user stories for a multi-language and localization feature covering: language selection, date/number formatting, right-to-left text support, and translated content management.

69. Write user stories for a self-service reporting feature where non-technical users can: build reports using a visual interface, save templates, schedule automated delivery, and share reports with colleagues.
 70. Generate user stories for an API documentation portal where developers can: browse endpoints, view request/response examples, test calls in a sandbox, and register for API keys.
-

CATEGORY 2: REQUIREMENTS GATHERING & ELICITATION

80 Prompts

Elicitation Interview Questions

1. Generate 10 open-ended discovery questions for an initial stakeholder interview with an agency director about a new case management system. Focus on: current pain points, future vision, success metrics, and constraints.
2. I'm meeting with end users of a legacy system being replaced. Write 12 interview questions to understand their: current workflows, workarounds, what they value in the current system, and what they wish it did differently.
3. Write 8 probing follow-up questions for when a stakeholder says "the system should be user-friendly." These should help me define specific, measurable usability requirements.
4. Create 10 questions for a technical discovery session with the IT team covering: existing architecture, integrations, data structures, and technical constraints.
5. Generate interview questions for a session with a procurement officer about a new vendor management system. Include questions about: current process, pain points, regulatory requirements, transaction volume, and approval workflows.
6. Write 8 questions for a requirements session focused on security and compliance for a system that will process [PII/PHI/federal data]. Include: classification level, access controls, audit requirements, and applicable regulations.
7. I'm conducting requirements discovery for a data warehouse project. Generate 10 questions to ask business stakeholders about: reporting needs, data sources, analysis frequency, current tools, and decision-making use cases.

8. Create discovery questions for a meeting with the finance department about a new budget tracking system. Cover: budget cycle, approval hierarchies, reporting requirements, integrations with existing tools, and year-end processes.
9. Write elicitation questions for a session with field workers whose paper inspection form is being digitized. Focus on: their environment, connectivity, device preferences, data entry challenges, and form completion workflow.
10. Generate 10 questions for a session about a customer-facing portal. Focus on: customer demographics, digital literacy, accessibility needs, preferred channels, common issues with the current process, and what success looks like.
11. Write discovery questions to understand the reporting and analytics needs of an executive team. Focus on: what decisions they make, what data they currently use, how often they need updates, and what format they prefer.
12. Create interview questions to understand a complex approval workflow. Cover: number of steps, who approves at each step, criteria used, how exceptions are handled, and current bottlenecks.
13. Generate questions for a session about data migration requirements. Cover: what data exists, its quality, how it's structured, what needs to migrate vs. be archived, what validation is needed, and the acceptable cutover window.
14. Write questions to elicit non-functional requirements from a technical stakeholder. Cover: performance, scalability, availability, disaster recovery, security, maintainability, and compliance requirements.
15. Create questions for a kickoff meeting with a new client agency about a BA engagement. Cover: project goals, success criteria, key stakeholders, timeline constraints, budget boundaries, risks, and decision-making authority.

Requirements Workshops

16. Design a 2-hour requirements workshop agenda for defining the scope of a new [system type] for a [agency type]. Include: icebreaker, current-state walkthrough, future-state vision, requirements prioritization, and next steps.
17. Write a set of structured questions to guide a joint requirements session with both business and technical stakeholders who have conflicting priorities about a new system.

18. Create a facilitation guide for a requirements prioritization workshop using MoSCoW method. Include: facilitator instructions, materials needed, ground rules, and a results capture template.
19. I facilitated a 3-hour requirements workshop and have these raw notes: [paste notes]. Synthesize the requirements, group related items, and format as a structured requirements list with categories.
20. Write the instructions and template for a "Day in the Life" workshop where users walk through their typical workday to help identify requirements and pain points.
21. Design a requirements validation walkthrough agenda where stakeholders review and confirm a requirements document. Include: how to collect feedback, manage disagreements, and reach consensus.
22. Create affinity mapping prompts and category headings for a workshop where 15 stakeholders contribute requirements for a new [system]. Use categories: Must-Haves, Nice-to-Haves, Concerns, and Questions.
23. Write a structured questionnaire for a requirements survey sent to 50 end users who can't attend a workshop. Cover: current process satisfaction, task frequency, pain points, and feature priorities.
24. I'm facilitating a workshop with stakeholders who have very different opinions about scope. Write ground rules, conflict resolution guidelines, and a decision-making framework for reaching consensus.
25. Design a "Future State Visioning" exercise where stakeholders describe what success looks like in 2 years without thinking about current limitations. Include facilitator prompts and an output capture template.

Document Analysis

26. I have a copy of the current system's user manual: [paste excerpt]. Extract a list of functional capabilities that represent existing features we need to replicate or replace in the new system.
27. Analyze this existing report template: [paste template]. Identify all data fields, calculations, filters, and formatting requirements needed to replicate this report in a new system.

28. Review this current-state process document: [paste document]. Identify requirements for the new system by extracting: decision points, data inputs/outputs, roles, system interactions, and pain points.
29. I have the contract/SOW for a software implementation project: [paste relevant sections]. Extract the functional and non-functional requirements implied by the contract deliverables.
30. Analyze this regulatory document: [paste section]. Identify all requirements it imposes on a [system type] that processes [data type] for [agency type]. Format as a compliance requirements table with regulation references.
31. Review this data dictionary from the legacy system: [paste]. Identify which fields are critical to migrate, which are obsolete, and which need transformation for the new system.
32. Analyze this collection of user complaints and support tickets: [paste]. Group them by theme and identify the underlying requirements or system deficiencies they reveal.
33. I have meeting notes from the last 6 months of steering committee meetings: [paste]. Extract all decisions made, requirements implied, and constraints identified from these documents.
34. Review this draft RFP: [paste]. Identify requirements that are unclear, ambiguous, missing, or potentially contradictory. Suggest improved wording for each.
35. Analyze these screenshots from the current system: [describe screens]. Based on what you can see, write a list of functional requirements for a new system to replicate this functionality.

Stakeholder Analysis

36. I'm starting a requirements project for a [system type] with these stakeholders: [list names and titles]. Create a stakeholder analysis matrix showing: influence level, interest level, requirements focus area, and recommended engagement approach.
37. Write a stakeholder communication plan for a 6-month requirements and design phase for a state agency IT modernization. Cover: frequency, format, audience, channel, and responsible party for each communication type.
38. I have conflicting requirements from two stakeholders: [describe conflict]. Write a structured summary of both positions, identify the underlying interests, and suggest 3 possible resolution approaches.

39. Generate questions to identify hidden stakeholders for a project affecting [department/agency]. Include questions about: downstream impacts, system integrations, regulatory oversight, and indirect users.
40. Write a RACI matrix for the requirements phase of a system development project with these roles: Business Sponsor, Program Manager, Business Analyst, Technical Lead, End User Representatives, Legal/Compliance, and IT Security.
41. A key stakeholder is disengaged and not responding to meeting invitations or review requests. Write an escalation email to their supervisor explaining the situation and the impact on the project timeline.
42. I need to present requirements to an executive who wants a 10-minute briefing. Write a one-page executive summary of these requirements: [paste requirements].
43. Write a requirements sign-off email explaining: what stakeholders are approving, the implications of approval, the change request process after sign-off, and the response deadline.
44. Two department heads disagree on the priority of a requirement. Write a decision memo presenting both perspectives, the trade-offs, and a recommendation for the project sponsor.
45. Create a requirements FAQ document answering the 10 most common questions stakeholders ask during a requirements review cycle.

Business Rules Extraction

46. Review this policy document: [paste]. Extract all business rules implied by the policy and format them as structured statements using the format: IF [condition] THEN [action/result].
47. I need to document the decision logic for a loan eligibility check. Based on this description: [paste], write the business rules as a decision table showing conditions and outcomes.
48. Convert these narrative business rules into structured rule statements: [paste narrative]. Each rule should be unambiguous, testable, and independent of implementation details.
49. Write business rules for a document routing workflow where documents route to different approvers based on: document type, dollar amount, department, and urgency level.

50. Validate that these business rules are complete. Identify any gaps, contradictions, or missing conditions in this rule set: [paste rules].

Requirements Organization & Documentation

51. Organize these raw requirements into a structured Business Requirements Document (BRD) with sections: Executive Summary, Business Objectives, Stakeholder Analysis, Scope, Functional Requirements, Non-Functional Requirements, Constraints, and Assumptions.
52. Write the Scope section of a BRD for a project to modernize the [agency]'s case management system. Include: what is in scope, what is explicitly out of scope, and the rationale for the boundaries.
53. These requirements came from multiple stakeholders and contain duplicates, conflicts, and gaps. Deduplicate them, flag conflicts, identify gaps, and organize by functional area: [paste requirements].
54. Write the Assumptions and Constraints section for a system modernization BRD. Include: technology constraints, regulatory constraints, resource constraints, timeline constraints, and key assumptions.
55. Convert this list of high-level requirements into a Requirements Traceability Matrix (RTM) template with columns: Requirement ID, Description, Source, Priority, Status, Test Case ID, and Design Reference.
56. Write a glossary of terms for a BRD for a [type] system in the [industry] sector. Include definitions for key business terms, acronyms, and technical terms used throughout the document.
57. I need to prioritize 30 requirements with my stakeholders. Write a requirements prioritization memo proposing a scoring approach based on: business value, implementation risk, regulatory requirement, and user impact.
58. Write the Business Objectives section of a BRD for a project to [objective]. Include 5–7 SMART objectives aligned to the organization's strategic goals.
59. Create a requirements change log template and write the change control process description for a requirements document that has been baselined.
60. Format these requirements into IEEE 830 Software Requirements Specification (SRS) structure: [paste requirements]. Use proper numbering, categories, and include a traceability table.

Gap & Coverage Analysis

61. Review this requirements document: [paste]. Identify any functional areas that appear missing or underspecified compared to a typical [system type] implementation.
62. I have requirements for a new system and a list of features in the current system. Identify which current features are not covered by the new requirements: Current features: [list]. New requirements: [list].
63. Compare these requirements to the [regulation/standard] compliance checklist: [paste both]. Identify which compliance requirements are addressed, which are missing, and which are partially addressed.
64. Review the functional requirements for this system: [paste]. Identify any non-functional requirements that are implied but not explicitly stated (security, performance, accessibility, auditability).
65. I've drafted requirements for a user interface but may have missed some states. For a [form/screen type], identify all UI states that need requirements: empty, loading, error, success, disabled, read-only, and any others.

Validation & Review

66. Review these requirements for testability. Identify any that contain vague terms like "user-friendly," "fast," or "should be easy" and rewrite them with specific, measurable criteria: [paste requirements].
67. Conduct a requirements peer review of this section: [paste]. Check for: completeness, consistency, correctness, feasibility, and verifiability. Format your findings as a review comment log.
68. These requirements were written 6 months ago and the business context has changed. Review them against this updated context: [paste context]. Identify which requirements are still valid, need updating, or can be removed.
69. Write a requirements validation checklist that the project team can use before sending requirements to stakeholders for sign-off.
70. I need to reconcile requirements from three different sources: stakeholder interviews, existing documentation, and regulatory requirements. Reconcile them into a single unified requirements list with sources noted: [paste all three].

Elicitation Techniques

71. Design a card sorting exercise to help stakeholders prioritize 25 potential system features. Write: instructions, materials needed, facilitation guide, and how to interpret the results.
 72. Write a structured observation guide for shadowing a [role] at a [agency type] for one day. Include: what to observe, what to record, and what questions to ask.
 73. Create a prototype feedback questionnaire for collecting structured requirements input from users who have reviewed a low-fidelity mockup of a new [screen/feature].
 74. Write instructions and an analysis template for a "5 Whys" root cause exercise to understand why users are currently doing manual workarounds instead of using the existing system.
 75. Design a focus group discussion guide for gathering requirements from 8 end users about a new [feature] in a case management system. Include: opening questions, main topic questions, probing questions, and a wrap-up.
 76. Write a requirements brainstorming session plan using the "How Might We" technique for identifying solutions to [identified problem]. Include facilitator instructions, prompts, and grouping methodology.
 77. Create a structured questionnaire for evaluating whether an existing COTS product meets a set of requirements. Include: evaluation criteria, scoring methodology, and a comparison matrix template.
 78. Write a "Day in the Life" observation report template for documenting requirements gathered from shadowing a [role type] in their work environment.
 79. Design a requirements prioritization exercise using dot voting for 12 stakeholders choosing the top 10 priorities from 35 requirements. Include facilitation instructions and a scoring template.
 80. Write a structured elicitation plan for a 3-month requirements phase using a combination of interviews, workshops, document analysis, and prototyping. Include: timeline, responsible parties, and deliverables for each activity.
-

CATEGORY 3: MEETING MINUTES & ACTION ITEMS

60 Prompts

Organizing Raw Notes into Minutes

1. I have these raw notes from a requirements workshop: [paste notes]. Organize them into formal meeting minutes with: Date & Time, Attendees, Agenda Items Discussed, Key Points, Decisions Made, Action Items (Owner + Due Date), and Next Meeting date.
2. Clean up and professionalize these rough meeting notes: [paste notes]. Fix grammar, clarify unclear points, remove filler language, and format as polished meeting minutes.
3. These notes are from a steering committee meeting: [paste notes]. Extract only the decisions made and action items assigned. Format as a Decision & Action Item Log.
4. Here's a transcript of a 60-minute requirements meeting: [paste transcript]. Create structured meeting minutes highlighting: the most important discussions, decisions, and next steps. Omit small talk and tangents.
5. Transform these bullet-point meeting notes into a formal narrative minutes document suitable for sharing with senior leadership: [paste notes].
6. I attended a meeting where multiple topics were discussed but the conversation jumped around. Reorganize these notes by agenda topic and add subheadings: [paste notes].
7. These notes were taken by multiple people during the same meeting and contain duplicates and contradictions. Merge them into a single clean set of minutes: [paste notes from Person A and Person B].
8. Create a one-page executive summary of these meeting minutes for a sponsor who didn't attend: [paste minutes].
9. I need to convert these informal Slack conversation notes into professional meeting minutes suitable for a project record: [paste conversation].
10. Here are notes from a vendor demonstration. Extract: key capabilities shown, gaps identified, questions raised, and evaluation notes in a structured format: [paste notes].

Follow-Up Emails & Communications

11. Write a follow-up email to all attendees of a requirements workshop summarizing: what was accomplished, key decisions made, action items with owners and due dates, and next steps. Meeting details: [paste notes].
12. Draft a professional follow-up email to a stakeholder who missed a requirements meeting, summarizing the key decisions affecting their area and requesting their input by [date].
13. Write a stakeholder update email to the project sponsor summarizing progress from this week's BA activities: [describe activities and findings].
14. Create a meeting recap email for a kickoff meeting capturing: project overview, team introductions, scope summary, timeline, immediate next steps, and where to find project documents.
15. Write a follow-up email requesting sign-off on requirements reviewed in today's meeting. Reference the specific sections, what attendees agreed to, and the deadline for formal approval.
16. Draft a meeting cancellation email with rescheduling request. The original meeting was a requirements review. Include: why it's being rescheduled and what preparation attendees should do before the rescheduled meeting.
17. Write a follow-up to a difficult meeting where stakeholders disagreed on scope. The email should summarize: areas of agreement, areas still in dispute, the proposed resolution process, and next steps.
18. Create a pre-meeting email to distribute 48 hours before a requirements review. Include: agenda, documents to review, what participants should come prepared to do, and logistics.
19. Write a post-meeting email acknowledging a stakeholder who provided valuable input and confirming how their feedback will be incorporated into the requirements.
20. Draft an email to a stakeholder who verbally approved requirements in a meeting but hasn't signed the formal sign-off document. Include a polite but firm reminder with the attachment.

Action Item Management

21. I have action items from various meetings this week: [paste items]. Consolidate them into a single tracker table with columns: ID, Description, Owner, Due Date, Status, and Notes.
22. Write a weekly action item status update email to the project manager. Based on this list: [paste items with statuses], summarize: what's complete, what's on track, what's at risk, and what's blocked.
23. I need to follow up with 5 team members about overdue action items. Write a professional but firm reminder email template that can be personalized for each person.
24. Create an action item aging report from this list: [paste items with original due dates]. Categorize by: Completed On Time, Completed Late, Due This Week, Overdue 1–7 days, Overdue 8–30 days, and Critically Overdue 30+ days.
25. Write an escalation email to a project manager about a team member who has had the same action item overdue for 3 weeks and is not responding to follow-ups.
26. Review these action items and identify which are clearly defined vs. vague. For the vague ones, rewrite them with: a specific deliverable, a named owner, and a realistic due date: [paste items].
27. Create a RACI-aligned action item list from these meeting notes: [paste notes]. For each action item, identify who is Responsible, Accountable, Consulted, and Informed.
28. Write the action items section of a weekly status report for a BA engagement. Include: items completed this week, items due next week, items at risk, and items needing sponsor decision.
29. I have action items assigned to external vendors and stakeholders outside the core team. Write a professional tracking email to each external party requesting a status update.
30. Create an action item closeout confirmation email that formally marks an item as complete, documents the outcome, and notifies all relevant parties.

Meeting Agendas & Prep

31. Create a detailed agenda for a 2-hour requirements review meeting reviewing [document name] with [number] stakeholders. Include: time allocations, facilitator notes, expected outcomes, and decision points.

32. Write an agenda for a 90-minute sprint planning meeting. Cover: sprint goal definition, backlog review, story point estimation, capacity planning, and sprint commitment.
33. Create an agenda for a 1-hour weekly project status meeting with standing items, rotating items, and a parking lot section. Make it efficient enough to finish in under 60 minutes.
34. Write a kickoff meeting agenda for a new BA engagement with a government agency. Cover: introductions, project overview, scope discussion, roles and responsibilities, communication protocols, and next steps.
35. Design an agenda for a lessons learned meeting at the end of a project phase. Include structured reflection on: what went well, what didn't, root causes, and improvement actions for future phases.
36. Create an agenda for a vendor selection meeting evaluating 3 shortlisted vendors. Include: evaluation criteria review, scoring discussion, reference check findings, risk discussion, and recommendation vote.
37. Write a pre-meeting preparation guide for stakeholders attending a BRD review session. Include: what to read in advance, how to provide feedback, what questions to think about, and what decisions will be made.
38. Create an agenda for a data migration planning meeting covering: data inventory review, migration approach options, risk discussion, resource requirements, timeline, and go/no-go criteria.
39. Design a UAT kickoff meeting agenda covering: UAT objectives, scope of testing, schedule, roles, defect reporting process, and go-live criteria.
40. Write an agenda for a change control board meeting where 3 change requests will be reviewed. Include: presentation format, evaluation criteria, decision process, and documentation requirements.

Specialized Meeting Types

41. Write minutes for a "Three Amigos" meeting (BA, Developer, Tester) reviewing a user story. Document: the story discussed, clarifications made, acceptance criteria confirmed, and edge cases identified.

42. Create a meeting summary for a technical design review where an architect presented 2 solution options. Document: each option, pros and cons discussed, questions raised, and the decision made.
43. Write minutes for an executive steering committee meeting where: project status was reviewed, a scope change was proposed, a budget variance was discussed, and a go/no-go decision was made.
44. Create a summary document for an agile retrospective including: format used, what went well, what didn't, action items with owners, and a team satisfaction rating.
45. Write minutes for a conflict resolution meeting where two departments disagreed on data ownership. Document: each party's position, the mediation process, the agreed resolution, and the escalation path if the issue recurs.
46. Create a risk review meeting summary documenting: each risk discussed, current status, mitigation actions taken, revised probability and impact ratings, and new risks identified.
47. Write a summary of a requirements walkthrough where a BA presented requirements to developers. Document: each section reviewed, clarifications needed, feasibility concerns raised, and technical questions requiring business answers.
48. Create meeting notes for a go-live readiness review covering: completed items, outstanding items, open defects, risk assessment, business readiness confirmation, and go/no-go decision.
49. Write a summary of a lessons learned debrief covering: what went well, what the team would do differently, specific process improvement recommendations, and who is responsible for implementing each.
50. Create minutes for a contract negotiation meeting summarizing: items agreed, items still in negotiation, proposed compromise positions, legal concerns raised, and next steps.

Status Reporting

51. Write a weekly BA status report for a project manager covering: work completed this week, work planned for next week, decisions needed, risks/issues, and percentage complete for each active deliverable.
52. Create a monthly project status report for a government sponsor covering: executive summary, accomplishments, upcoming milestones, budget status, risks and mitigations, and decisions required.

53. Write a concise "3 things" status update for a project sponsor who prefers brevity: completed, in progress, and blockers.
54. Transform this detailed status report into a 5-slide executive presentation format: [paste report]. Each slide should have one clear message supported by 3 key points.
55. Write a status report for a project that is behind schedule. Acknowledge the delay, explain the root cause, describe the recovery plan, and provide a revised forecast.
56. Create a risk and issue log update for this week's status report. From these meeting notes: [paste], identify new risks, update existing statuses, and flag items requiring immediate escalation.
57. Write a milestone completion memo documenting that the requirements phase is complete. Include: what was delivered, which stakeholders approved it, and what the next phase entails.
58. Create a status dashboard summary in text format covering: overall project health (RAG status), schedule health, budget health, scope health, and team health for a weekly leadership briefing.
59. Write a sprint velocity report for a 3-sprint period showing: planned vs. completed story points, team capacity, velocity trend, and projected completion based on remaining backlog.
60. Draft an end-of-engagement summary report for a BA consulting assignment covering: objectives, what was delivered, key decisions made, lessons learned, and recommended next steps for the client.
